

Real Time Mobile Tracking

Objective: Using a website track location of mobile phones and show them on google maps, with some additional features like history, shortest path with live traffic update and others.

Workflow:

To Track a mobile you have to enter the mobile number you will get a link which says to allow to access location and give you an OTP.

Submit the required OTP and you will be logged.

The resultant page shows the location of mobile and other functionality as mentioned earlier.

We are working on the way to get the location of a mobile without using any app with best accuracy.

Requirements: SMS Gateway API, Google API for maps, traffic updates, Database .

Drawbacks: Internet must be active on the phone to track it.
